- Urethra

Understanding each part's structure and function is essential for grasping how the system operates holistically.

Anatomy of the Urinary System: An In-Depth Look

Kidneys: The Filtration Powerhouses

The kidneys are paired, bean-shaped organs located on either side of the spine, just below the rib cage. They are the central organs of the urinary system responsible for filtering blood, removing waste, and producing urine.

Key features of the kidneys include:

- Renal Cortex: The outer part of the kidney, containing nephrons—the functional units of the kidney.
- Renal Medulla: The inner region, organized into renal pyramids.
- Renal Pelvis: A funnel-shaped structure that collects urine before passing it to the ureter.
