Common Topics and Sample Solutions

Here, we highlight some core topics covered in the manual with brief insights into typical solutions.

Limits and Continuity

- Problem Type: Find the limit of a function as x approaches a specific value.
- Approach: Use algebraic simplification, factoring, rationalization, or L'Hôpital's Rule as needed.
- Sample Solution: For $\lim_{x \rightarrow 2} \frac{x^2 - 4}{x - 2}$, factor numerator to get $\frac{(x - 2)(x + 2)}{x - 2}$. Cancel $(x - 2)$, then evaluate the remaining function at $(x=2)$, resulting in 4.

Derivatives and Differentiation Rules

- Problem Type: Differentiate a composite function using chain rule.
- Approach: Identify inner and outer functions, apply chain rule step-by-step.
- Sample Solution: To differentiate $f(x) = \sin(3x^2 + 2)$, set $(u = 3x^2 + 2)$. Then $f(x) = \sin u$, so $f'(x) = \cos u \cdot u'$. Compute $(u' = 6x)$, thus $f'(x) = 6x \cos(3x^2 + 2)$.

Applications of Derivatives

- Problem Type: Find local maxima and minima.
- Approach: Find critical points by setting derivative to zero, then use second derivative test or first derivative test.
- Sample Solution: For $f(x) = x^3 - 3x^2 + 2$, find $f'(x) = 3x^2 - 6x$. Set $f'(x) = 0$: $3x(x - 2) = 0$. Critical points at $(x=0)$ and $(x=2)$. Evaluate $f''(x) = 6x - 6$. At $(x=0)$, $f''(0) = -6$, indicating a local minimum.

Integration Techniques

- Problem Type: Integrate rational functions using partial fractions.
- Approach: Factor denominator, decompose into simpler fractions, then integrate each term.
- Sample Solution: $\int \frac{1}{(x-1)(x+2)} dx$. Partial fractions: $\left(\frac{A}{x-1} + \frac{B}{x+2}\right)$. Solving, $(A=1/3)$, $(B=-1/3)$. Integrate to get $\left(\frac{1}{3}\ln|x-1| - \frac{1}{3}\ln|x+2| + C\right)$.

Practical Tips for Students and Educators

For Students:

- Regularly review solutions to reinforce learning.
- Don't rely solely on the manual; use it as a guide while developing problem-solving intuition.
- Cross-reference solutions with your notes and textbook explanations.
- Focus on understanding the underlying principles rather than memorizing steps.
