The Pre-Industrial Era: Animals as Workhorses

Long before the bicycle became a symbol of personal mobility and revolutionized transportation, draft animals contributed significantly to societal progress:

- Agricultural labor: Oxen and horses plowed fields, enabling the development of civilizations.
- Transportation: Carriages, wagons, and carts drawn by animals transported goods and people across terrains.
- Military campaigns: Horses were integral to armies, providing mobility and strategic advantage.

The Bicycle's Roots and Animal Influence

While the modern bicycle was invented in the late 19th century, its early predecessors, such as the velocipede and the penny-farthing, were often associated with the same communities that relied heavily on draft animals. Moreover, the cultural landscape of the time viewed animals as essential partners in progress, and this influence extended into the burgeoning world of cycling.

The Transition from Animal-Powered to Mechanical Power

The late 19th and early 20th centuries marked a transition phase, where mechanization began to replace draft animals in transportation and industry:

- Introduction of internal combustion engines: Steam, then gasoline-powered vehicles gradually rendered draft animals less critical for transportation.
- Impact on cycling: As vehicles replaced animal-drawn carts, cycling evolved into a sport and leisure activity, with less direct reliance on draft animals.
