Key Concepts in Thermodynamics

- System and Surroundings: The system refers to the part of the universe under study, while the surroundings encompass everything outside the system.
- State Functions: Properties such as temperature, pressure, volume, and internal energy that define the state of a system.
- Processes: Changes from one state to another, including isothermal, adiabatic, isobaric, and isochoric processes.

Understanding Temperature in Thermodynamics

Temperature is a measure of the average kinetic energy of particles within a substance. It plays a crucial role in determining the direction of heat transfer and the state of a system.

Definition and Units of Temperature

- Definition: Temperature quantifies the thermal energy of a system.
- Units:

- Celsius ($^{\circ}\text{C}$): Based on the freezing and boiling points of water.
- Kelvin (K): The SI base unit, starting at absolute zero.
- Fahrenheit ($^{\circ}\text{F}$): Used primarily in the United States.

Absolute Zero and the Kelvin Scale

- Absolute Zero: The theoretical temperature where particles have minimum thermal motion, at 0 K.
- Kelvin Scale: Starts at absolute zero, with units equal to Celsius degrees.

Measuring Temperature

- Thermometers: Devices such as mercury thermometers, thermocouples, and resistance temperature detectors.

Heat in Thermodynamics

Heat is a form of energy transfer between systems due to a temperature difference. It is not a property of a system but a process quantity.

Definition of Heat

- Heat (Q): Energy transferred because of a temperature difference, measured in joules (J).

Methods of Heat Transfer

- Conduction: Transfer through direct contact.
- Convection: Transfer via fluid movement.
- Radiation: Transfer through electromagnetic waves.

Heat Capacity and Specific Heat

- Heat Capacity (C): The amount of heat needed to change a system's temperature by 1°C .
- Specific Heat (c): Heat capacity per unit mass, indicating how much energy is needed to raise 1

gram of a substance by 1°C.

Thermodynamics Laws Relevant to Temperature and Heat

First Law of Thermodynamics
