Having access to an accurate answer key minimizes confusion and reduces the likelihood of errors during dissection, leading to a more productive and educational lab experience.

Common Fetal Pig Prelab Questions and Model Answers

Below are some of the typical questions found in fetal pig prelab assignments along with detailed answers. These serve as a valuable reference for students preparing their prelab reports.

1. What is the purpose of the fetal pig in biological studies?

Answer:

The fetal pig serves as a model organism in biological studies because it shares many anatomical and physiological similarities with humans. It allows students to study organ systems such as the circulatory, respiratory, digestive, and reproductive systems in a tangible way. Using fetal pigs helps students learn about vertebrate anatomy, organ functions, and the relationships between different body systems.

2. Identify and label the major external features of the fetal pig.

Answer:

Major external features include:

- Snout: The nose area used for sensing and breathing.
- Pinnae: The external ears.
- Eyes: Visual organs located on the head.
- Tail: The posterior end, which may be short or absent in some specimens.
- Limbs: Forelimbs and hindlimbs used for movement.
- Umbilical cord: The structure connecting the fetus to the placenta (if present).

Tip: Use a diagram to practice labeling these features for better understanding.

3. Describe the location and function of the diaphragm in the fetal pig.

Answer:

The diaphragm is a dome-shaped muscle located beneath the lungs and heart, separating the thoracic cavity from the abdominal cavity. Its primary function is to facilitate breathing by contracting and relaxing, which changes the volume of the thoracic cavity and allows air to enter and exit the lungs.

4. List the organs involved in the digestive system of the fetal pig.

Answer:

- Mouth: The entry point for food.
- Esophagus: A muscular tube that transports food to the stomach.
- Stomach: Breaks down food with acids and enzymes.
- Small Intestine: Absorbs nutrients from digested food.
- Large Intestine: Absorbs water and forms feces.
- Liver: Produces bile to aid in fat digestion.
- Pancreas: Produces digestive enzymes and insulin.
- Anus: The opening at the end of the digestive tract for waste elimination.

5. What are the primary functions of the fetal pig's circulatory system?

Answer:

The circulatory system transports nutrients, gases, hormones, and waste products throughout the body. Key functions include:

- Delivering oxygen-rich blood from the lungs to the body tissues.
- Carrying deoxygenated blood back to the lungs for oxygenation.
- Circulating nutrients absorbed from the digestive system.
- Removing metabolic wastes for excretion.

Strategies for Using the Fetal Pig Prelab Answer Key Effectively
