time. Many models assume stationarity for valid inference.

- **Autocorrelation:** The correlation of a time series with its past values. Detecting autocorrelation helps in model selection.

- **Cointegration:** When non-stationary series are linked by a long-term equilibrium relationship, cointegration models can capture this connection.

- **Model Types:** Common models include AR (AutoRegressive), MA (Moving Average), ARMA, ARIMA, and GARCH models for volatility clustering.
