The test is typically administered online, either as part of an initial screening process or during the interview stages.

Structure and Content of the SHL Mechanical Comprehension Test

Understanding the structure of the test is crucial for effective preparation. The SHL Mechanical

Comprehension Test is usually a multiple-choice assessment that presents a series of questions designed to evaluate various aspects of mechanical reasoning.

Format and Duration

- Number of Questions: Typically ranging from 24 to 36 questions, depending on the version.
- Time Limit: Usually 15 to 20 minutes, demanding quick thinking and efficient problem-solving.
- Question Type: Multiple-choice questions with four options each.

Core Content Areas

The questions are structured around fundamental mechanical concepts, including:

- Levers and Mechanical Advantage: Understanding how different types of levers work, calculating mechanical advantage, and applying these principles to real-world scenarios.
- Pulleys and Gears: Recognizing how pulleys and gear systems transfer motion and force, calculating speed ratios, and understanding mechanical efficiency.
- Fluid Mechanics: Basic principles involving liquids and gases, such as pressure, force, and flow.
- Simple Machines: Inclined planes, screws, wedges, and their functions.
- Friction and Wear: How friction affects mechanical systems, and how to minimize or utilize it.
- Basic Physics: Concepts like torque, force, mass, and acceleration, as they relate to mechanical systems.

Question Formats

Questions often involve diagrams, mechanical devices, or scenarios requiring interpretation and calculation. Common formats include:

- Diagram-based questions: Analyzing mechanical systems depicted visually.
- Scenario questions: Applying principles to hypothetical situations.
- Calculations: Performing simple arithmetic related to mechanical principles.
- Identification: Recognizing parts or functions of mechanical devices.

Sample Questions and Explanation

To illustrate, here are typical sample questions and their reasoning:

- Levers and Mechanical Advantage

Question: A person applies a force of 50 N to lift a load using a lever. The effort arm is 2 meters, and the load arm is 0.5 meters. What is the mechanical advantage, and what is the load's weight?

Answer:

Mechanical advantage (MA) = effort arm / load arm = $2 / 0.5 = 4$

Load = effort force $\times$ MA = $50 \text{ N} \times 4 = 200 \text{ N}$

- Pulley Systems

Question: A pulley system has a mechanical advantage of 3. If a person applies a force of 100 N, what is the maximum load they can lift?

Answer:

Maximum load = applied force $\times$ mechanical advantage = $100 \text{ N} \times 3 = 300 \text{ N}$

- Gears

Question: Two gears are meshed; Gear A has 20 teeth, and Gear B has 40 teeth. If Gear A rotates at 100 rpm, what is the rotational speed of Gear B?

Answer:

Speed ratio = teeth on Gear B / teeth on Gear A = $40 / 20 = 2$

Therefore, Gear B's speed = $100 \text{ rpm} / 2 = 50 \text{ rpm}$
