Understanding Steel: Composition and Types

What Is Steel?

Steel is an alloy primarily composed of iron and carbon, with small amounts of other elements such

as manganese, chromium, nickel, molybdenum, and vanadium. The carbon content typically ranges from 0.02% to 2.1%, influencing the steel's hardness, ductility, and strength.

Types of Steel

Steel can be categorized into various types based on composition, manufacturing process, and intended use:

- Carbon Steel: Contains varying levels of carbon; classified into low, medium, and high carbon steels.
