Students and staff can often request maintenance or report issues through the university's facilities portal or maintenance hotline.

Basic Components of Air Conditioning Systems

Understanding the main components of an air conditioning system helps in diagnosing common problems.

Key Parts of an Air Conditioner

- **Compressor:** The "heart" of the system that compresses refrigerant and circulates it through the coils.
- **Condenser Coils:** Located outside, these coils release heat from the refrigerant to the outside air.
- **Evaporator Coils:** Inside the building, these coils absorb heat from indoor air, cooling it down.
- **Thermostat:** A device that measures indoor temperature and signals the system to turn on or off.
- **Air Handler:** Contains the blower fan and filters that circulate cooled air throughout the space.

Additional Components

- **Filters:** Trap dust, pollen, and other particles to improve air quality and system efficiency.
- **Vents and Ducts:** Distribute cooled air and return warm air back to the system for re-cooling.

- Expansion Valve: Regulates refrigerant flow into the evaporator coils.

Best Practices for Using Air Conditioning at Boston University

Proper usage can extend the lifespan of your unit, improve efficiency, and reduce energy costs.

Optimizing Comfort and Efficiency

- **Set Appropriate Temperatures:** For energy savings, set your thermostat to 75°F (24°C) during occupied hours and higher when away.
- **Use Programmable Thermostats:** Automate temperature adjustments based on your schedule to avoid unnecessary cooling.
- **Maintain Good Ventilation:** Ensure vents are unobstructed and doors are properly closed when cooling.
- **Close Curtains or Blinds:** Minimize heat gain from sunlight during the day.
- **Use Ceiling Fans:** Circulate air more effectively, allowing you to set the thermostat a few degrees higher without sacrificing comfort.

Energy Conservation Tips

- Regularly replace or clean filters to maintain airflow and efficiency.
- Schedule professional maintenance before peak cooling seasons.
- Avoid blocking vents with furniture or curtains.
- Seal leaks around windows and doors to prevent cool air from escaping.
