- Barrier Reefs: Separated from the landmass by a lagoon; Great Barrier Reef is the world's largest.
- Atolls: Circular or oval reefs that encircle a lagoon, often forming after volcanic islands sink.

3. Formation Process

- Coral reefs start as tiny larvae that settle on substrates like rocks or dead coral.
- Over time, polyps multiply and secrete calcium carbonate, creating the reef structure.
- The growth rate varies but typically ranges from 0.3 to 2 centimeters per year.

The Rich Biodiversity of Coral Reefs

4. Coral Reefs Are Among the Most Diverse Ecosystems
