Question: Explain the factors that influence climate in a region.

Model Answer (from Memorandum):

Climate is influenced by several factors including latitude (distance from the equator), altitude (height above sea level), proximity to water bodies (which moderate temperature), prevailing winds, ocean currents, and topography. These factors determine temperature, rainfall patterns, and humidity levels in a region.

Long-Answer Question Example

Question: Discuss the impact of urbanization on the environment.

Model Answer (from Memorandum):

Urbanization leads to increased pollution, as more vehicles, industries, and human activities produce waste and emissions. It results in the loss of natural habitats and green spaces, leading to biodiversity decline. The expansion of urban areas causes land degradation and increased surface

runoff, which can lead to flooding. Additionally, urbanization contributes to the urban heat island effect, raising temperatures in city centers. Proper planning and environmental management are crucial to mitigate these impacts.

Tips for Teachers and Examiners Using the Memorandum

Ensuring Consistency in Marking

- Follow the guidelines strictly
- Use the specified mark allocations
- Reward correct and relevant answers equally

Updating the Memorandum

- Incorporate recent developments and changes in the syllabus
- Include alternative acceptable answers
- Clarify ambiguous questions to avoid misinterpretation

Providing Feedback to Students

- Highlight strengths and areas for improvement
- Use the memorandum to justify marks awarded
- Encourage students to understand the reasoning behind model answers
