Sample Questions and Their Answers

To give you a clearer understanding, here are some sample questions from each major category along with detailed answers.

Cell Structure and Function

- **Question:** What is the main function of the mitochondria?

- **Answer:** The mitochondria are known as the powerhouses of the cell because they generate most of the cell's supply of adenosine triphosphate (ATP), which is used as a source of chemical energy.

Genetics and Heredity

- **Question:** Explain Mendel's Law of Segregation.

- **Answer:** Mendel's Law of Segregation states that during the formation of gametes (eggs and sperm), the two alleles for a gene separate so that each gamete carries only one allele for each gene. This ensures offspring inherit one allele from each parent.

Evolution and Natural Selection

- **Question:** What is an example of natural selection in nature?

- **Answer:** The peppered moth in England is a classic example. During the Industrial Revolution, soot blackened trees, and dark-colored moths were less visible to predators, leading to an increase in their population?a process driven by natural selection.

Photosynthesis and Cellular Respiration

- **Question:** What are the main products of photosynthesis?

- **Answer:** The main products of photosynthesis are glucose (a form of sugar) and oxygen. The process converts light energy into chemical energy stored in glucose molecules.

Human Body Systems

- **Question:** Describe how the circulatory and respiratory systems work together.

- **Answer:** The respiratory system exchanges gases with the environment, bringing oxygen into the lungs and removing carbon dioxide. The circulatory system transports oxygen-rich blood from the lungs to tissues and carries carbon dioxide back to the lungs for exhalation, working together to

maintain oxygen and carbon dioxide levels in the body.

Ecology and Environment

- **Question:** What is a food chain?

- **Answer:** A food chain is a sequence that shows how energy and nutrients flow from one organism to another through feeding relationships, starting from producers (like plants) to consumers (herbivores and carnivores).
