## Sample Questions and Their Corresponding Answers

Below are illustrative examples similar to questions from the 2013 workout, along with detailed explanations of the answers:

### Question 1: Diagnosis Coding

Scenario: A patient presents with a fracture of the left femur following a fall. The physician documents "closed fracture of the left femur, initial encounter for fracture."

What is the correct ICD-10-CM code?

Answer:

S72.302A - Unspecified fracture of the left femur, initial encounter for closed fracture

Explanation:

The key points include recognizing the fracture type (closed), location (left femur), and encounter type (initial). The code S72.302A accurately captures this scenario, following ICD-10 coding conventions.

### Question 2: Procedure Coding

Scenario: A patient undergoes an outpatient laparoscopic cholecystectomy. The physician documents the removal of the gallbladder using minimally invasive techniques.

What is the appropriate CPT code?

Answer:

47562 - Laparoscopy, surgical removal of the gallbladder

Explanation:

CPT 47562 covers laparoscopic cholecystectomy. Proper coding requires matching the procedure described with the correct CPT code, considering the approach (laparoscopic) and procedure performed.

### Question 3: Modifier Usage

Scenario: A bilateral procedure is performed on the patient, and the code assigned is 27447 (arthroscopic meniscectomy).

What modifier should be appended?

Answer:

-50 (Bilateral procedure)

Explanation:

Modifier 50 indicates a procedure performed on both sides. Using this modifier correctly reflects the bilateral nature of the procedure, ensuring proper reimbursement and documentation.
