Product Classifications and Types

American Gypsum offers an extensive portfolio of gypsum board products categorized based on their core composition, facing materials, and intended applications:

- Regular Gypsum Board: Standard panels suitable for most interior wall and ceiling applications.
- Type X Fire-Rated Gypsum Board: Enhanced fire resistance, typically rated for 1, 2, or 3 hours,

used in fire-rated assemblies.

- **Moisture-Resistant Gypsum Board:** Featuring a water-resistant core, ideal for humid environments like bathrooms and kitchens.
- **Soundproof Gypsum Board:** Designed with enhanced sound attenuation properties for spaces requiring acoustic control.
- **Type C Gypsum Board:** Provides improved fire resistance and durability, often used in high-heat or high-humidity environments.

Each type conforms to testing standards such as ASTM C1396 (Standard Specification for Gypsum Board), ensuring consistency and reliability.

Performance Characteristics

American Gypsum's gypsum boards are engineered to meet key performance benchmarks:

- **Fire Resistance:** Type X and Type C panels contain non-combustible components that slow the spread of fire, crucial for code compliance and safety.
- **Moisture Resistance:** The moisture-resistant variants feature a water-repellent core and are often used in areas prone to humidity.
- **Sound Attenuation:** Certain panels incorporate additional mass or specialized facings to improve soundproofing.
- **Durability:** Impact-resistant panels are reinforced for high-traffic or commercial applications.
- **Environmental Impact:** Many products incorporate recycled content and are manufactured with eco-friendly processes.

Manufacturing Processes and Quality Control

Production Overview

American Gypsum's manufacturing facilities utilize state-of-the-art processes to produce gypsum board that adheres to strict quality standards. The core manufacturing involves:

- **Gypsum Core Preparation:** Natural or synthetic gypsum is heated and calcined to produce calcium sulfate dihydrate, which is then mixed with additives for desired properties.
- **Forming and Molding:** The slurry is poured onto paper facings, formed into panels, and passed through continuous dryers.
- **Drying and Cutting:** Excess moisture is removed via large, energy-efficient dryers, and panels

are cut to standard sizes, typically 4x8, 4x10, or 4x12 feet.

- Edge and Surface Treatment: Edges are shaped, and surfaces are smoothed or textured depending on product specifications.

Quality Assurance and Testing

American Gypsum employs rigorous quality control protocols to ensure product consistency:

- Material Testing: Raw materials are tested for purity, moisture content, and physical properties.
- In-Process Inspection: During manufacturing, panels are monitored for dimensions, surface quality, and core integrity.
- Final Testing: Finished panels undergo testing for fire resistance, moisture resistance, sound attenuation, and impact strength.
- Certifications: Products are certified by ASTM, UL, and other relevant bodies, providing assurance of compliance with safety and performance standards.

These processes enable the company to deliver drywall products that meet or exceed industry expectations.
