Cost Concepts and Cost Behavior

Understanding Costs in Management Accounting

Cost classification is fundamental for effective decision-making. The textbook categorizes costs based on their behavior, controllability, and relevance.

Types of Costs:

- Fixed Costs: Remain constant regardless of activity level (e.g., rent, salaries).
- Variable Costs: Change proportionally with activity (e.g., materials, direct labor).
- Semi-Variable Costs: Have both fixed and variable components (e.g., utility bills).

Answer Approach:

When tackling questions on cost behavior:

- Identify the cost type based on provided data.

- Understand how costs change with activity levels.
- Use cost-volume-profit (CVP) analysis to determine breakeven points and margin of safety.

Practical Tip: Use contribution margin analysis to assess the impact of sales changes on profitability.

Costing Systems and Techniques

Job Costing vs. Process Costing

Different manufacturing environments require different costing approaches:

- Job Costing: Suitable for custom or unique products (e.g., construction, shipbuilding).
- Process Costing: Used for homogeneous products produced continuously (e.g., chemicals, textiles).

Activity-Based Costing (ABC):

A more refined method that assigns overheads based on activities driving costs, providing better accuracy for product costing and pricing.

Answer Strategy:

- Clarify the product context.
- Explain the appropriateness of the costing system.
