DTP automates the configuration of trunk links, facilitating VLAN traffic across switches.

- Inter-VLAN Routing

Inter-VLAN routing enables devices on different VLANs to communicate. This can be achieved via router-on-a-stick or multilayer switches.

Sample Question:

Which device performs inter-VLAN routing in a switched network?

Answer:

Layer 3 switch or router

Explanation:

Since VLANs are separate broadcast domains, a Layer 3 device routes traffic between them.

- WAN Technologies

CCNA 2 also covers WAN connectivity options such as PPP, Frame Relay, and MPLS.

Sample Question:

Which WAN protocol encapsulates multiple Layer 3 protocols over serial links?

Answer:

PPP (Point-to-Point Protocol)

QuestionAnswer What is the purpose of configuring VLANs in a Cisco CCNA student lab? Configuring VLANs helps segment network traffic, improve security, and optimize performance by creating separate broadcast domains within a switch network. How do you verify VLAN configuration on a Cisco switch? Use commands like 'show vlan brief' to display VLANs configured on the switch and 'show vlan id [vlan number]' for detailed information about a specific VLAN. What is the significance of configuring a trunk link between switches? Trunk links carry traffic for multiple VLANs between switches, enabling inter-VLAN communication and expanding network segmentation across devices. How can students troubleshoot connectivity issues between devices in a CCNA lab? Students can use commands like 'ping', 'traceroute', 'show ip interface brief', and 'show running-config' to diagnose and resolve network connectivity problems. What is the role of DHCP in a CCNA lab environment? DHCP dynamically assigns IP addresses and network configuration parameters to devices, simplifying network management and ensuring devices have correct IP settings. How do you secure access to network devices in a CCNA lab? Implement security measures such as enabling password protection on console and VTY lines, using SSH for remote access, and applying access control lists (ACLs) to restrict unauthorized access. What is the purpose of configuring static routes in a CCNA lab? Static routes manually define specific network paths, enabling devices to communicate with remote networks when dynamic routing protocols are not used or not configured. Why is it important to save your configuration after making changes in a Cisco CCNA lab? Saving the configuration with the 'copy running-config startup-config' command ensures that your settings persist after a device reboot, preventing loss of configuration changes.
