homeowners, commercial entities, and municipal agencies across New Mexico and beyond.

Design Philosophy and Aesthetic Approach

Native and Drought-Tolerant Plants

A core aspect of the NMSU nursery landscape revolves around the use of native and drought-tolerant plants. This approach aligns with regional ecological principles, minimizes water consumption, and supports local biodiversity. The landscape design emphasizes plants that are adapted to the desert climate?plants that thrive with minimal supplemental irrigation and are resilient to temperature extremes.

Key plant categories include:

- Cacti and succulents: Agave, prickly pear, yucca
- Shrubs: Apache plume, desert willow, sagebrush
- Trees: Mesquite, desert holly, desert willow
- Perennials: Penstemon, desert marigold, blackfoot daisies

By integrating these species, the landscape maintains visual interest year-round while reducing maintenance needs and resource use.

Design Elements and Layout

The landscape features a mix of traditional and contemporary design elements, including:

- Xeriscape principles: Incorporating water-efficient plant groupings, mulched beds, and efficient irrigation systems.
- Pathways and seating areas: Designed for accessibility and educational tours.
- Educational signage: Explaining plant choices, water-saving techniques, and sustainable practices.
- Themed sections: Demonstrating different landscape styles, from formal xeriscape gardens to natural desert landscapes.

This thoughtful layout not only enhances visual appeal but also serves as an educational resource, inspiring visitors to adopt sustainable landscaping practices.

Plant Selection and Cultivation

Criteria for Plant Selection

The nursery landscape prioritizes plants that meet several criteria:

- Adaptability to local climate
- Low water requirements
- Resistance to pests and diseases
