\[

$$a = \frac{\text{change in speed}}{\text{time taken}}$$

\]

- Substitute values and solve

Example 2: Circuit Diagram

Question: Draw a simple circuit to demonstrate Ohm's law and explain the relationship between voltage and current.

Approach:

- Draw a circuit with a power supply, resistor, and ammeter

- State that as voltage increases, current increases proportionally (if resistance is constant)
- Reference the formula $(V = IR)$

Example 3: Experimental Data Analysis

Question: A student records the temperature change of a substance when heated. The data shows the temperature rising steadily. Explain the significance of the plateau observed during the heating process.

Approach:

- Recognize the plateau as a phase change (e.g., melting or boiling)
- Explain that heat energy is used for changing state, not raising temperature
- Relate this to latent heat concepts
