- Motor Output: Activating effector organs (muscles or glands) to produce responses.
- Homeostasis: Regulating internal conditions to maintain stability.
- Mental Activities: Including thinking, learning, memory, and emotions.

Structural Components of the Nervous System

The nervous system is primarily classified into two broad categories: the Central Nervous System (CNS) and the Peripheral Nervous System (PNS). Each plays a distinct yet interconnected role.

Central Nervous System (CNS)

The CNS comprises the brain and spinal cord. It acts as the processing center, receiving sensory data, interpreting it, and issuing commands.

- Brain: The most complex organ, divided into various regions:
