Sample Questions and Solutions from the June Common Exam Physical Science 2013

Understanding typical questions and their solutions can boost confidence and exam readiness. Here are some representative examples:

Question 1: Multiple Choice

Which of the following states of matter has a definite volume but no definite shape?

- A) Solid
- B) Liquid
- C) Gas
- D) Plasma

Answer: B) Liquid

Question 2: Short Answer

Define acceleration and describe how it differs from speed.

Solution: Acceleration is the rate of change of velocity with time. Unlike speed, which only measures how fast an object moves, acceleration considers both the speed and the direction of motion, indicating how quickly an object speeds up, slows down, or changes direction.

Question 3: Numerical Problem

A car accelerates from 0 to 20 m/s in 10 seconds. Calculate its acceleration.

Solution: Using the formula for acceleration:

Acceleration (a) = (Final velocity - Initial velocity) / Time

$$a = (20 \text{ m/s} - 0) / 10 \text{ s} = 2 \text{ m/s}^2$$

Therefore, the car's acceleration is 2 meters per second squared.

Question 4: Conceptual

Explain why metals are good conductors of electricity.

Solution: Metals have free electrons that can move easily throughout the material. When a voltage is applied, these free electrons drift, allowing electric current to flow efficiently. This property makes metals excellent conductors of electricity.
